HorizonHub User's Manual

Horizon Hotel Group

Installation & Set-up

Requirements:

1. Python 3.11+
2. Node.js v20.13.1
3. NPM 10.8.1
4. Firefox Web Browser

Initial Local Setup:

These steps must be followed in order. You only need to do this once per instance of HorizonHub to set things up, or if you change any fundamental part of setup.py or the code in backend or frontend.

YOU MUST HAVE YOUR SCRIPTS FOLDER ADDED TO YOUR PATH. Uvicorn will not work otherwise as it will not be able to find the python executable. (if you get a uvicorn not found error, you have not added your scripts folder to your path, do this, or use the direct path of the uvicorn executable)

1. Clone the GitHub repository at https://github.com/ktbilyeu/CS3300GroupProject. Make sure you are using the correct branch (currently development)
2. Open a terminal on your computer. Navigate to the project directory: **cd horizonhub**
3. Navigate to the backend directory: **cd backend**. Inside is the python backend.
4. Run the setup script with the local argument. This will install all requirements and setup the local env **python setup.py local**.
5. Run the server locally: **uvicorn main:app --reload --port 5555**
6. Open a new terminal and navigate to the HorizonHub/frontend directory. **cd HorizonHub/frontend**. Inside is the react (vite) frontend.
7. First install all required packages, these are in package.json: **npm i**.
8. Run the dev server: **npm run dev**
9. Website will be on localhost:5173 (frontend) and localhost:5555 (backend). To access the website, open your firefox browser and copy and paste **localhost:5173** into the URL bar.

To run the website again after initial setup:

1. Navigate to the project directory: **cd horizonhub**
2. Navigate to the backend directory: **cd backend**
3. Run the server locally: **uvicorn main:app --reload --port 5555**
4. Open a new terminal and navigate to the horizonhub/frontend directory: **cd horizonhub/frontend**
5. Run the dev server: **npm run dev**
6. Copy and paste **localhost:5173** into the URL bar.

Business Use Manual

Admin Log-in Setup:

The default admin account username to use at log-in is “admin”.

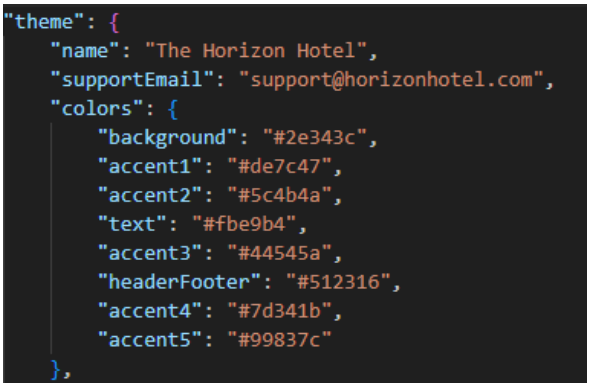

To change this, you can access the **setup.py** file located in horizonhub/backend and change the value of **“ADMIN_USER”** on line 49.

To change the password, which by default is “password”:

1. Access the same **setup.py** file in horizonhub/backend.
2. Locate the commented out code in line 46:
   ```
   import bcrypt; print(bcrypt.hashpw(b"your_password",
   bcrypt.gensalt()).decode())
   ```
3. Remove the “##”
4. Replace `"your_password"` with what you wish to change the password to.
5. Run the file and locate the printed output in the console/terminal, which should look something like “$2b$12$MlPMcgDvVCU.s10xcB2fneIjZ/ymgz5O52yH5pshAFF5.bwPq4SMq”
6. Copy and paste this new hash into the **ADMIN_PASS_HASH** value.
7. Recommend out the line of code on line 46, replace your changed password in that line back with a placeholder value for security reasons.
8. Save and exit.

Product Customization for your Hotel:

For all customization needs, access the **horizonhub/edit_me.json** file. Once the file is open, you can change any of the values to fit what your hotel provides. Here are some examples of what you can customize:

To change the name of the hotel, replace the content within “The Horizon Hotel” with the name of your hotel. To change the color scheme, convert the colors you wish to have to hex and replace the values under colors.

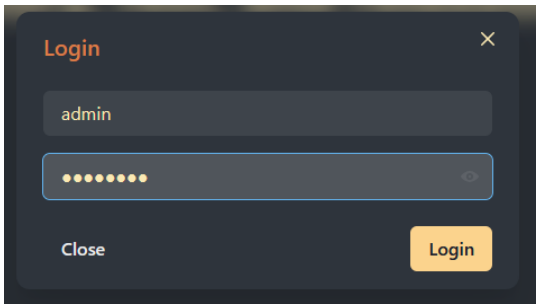

To change the advertised rooms/descriptions or other amenities, customize the values in “description” and “title”. To add a matching photo, add that photo to horizonhub/frontend/src/assets/images and ensure that the value in “image” matches it.

To change the offered room types, inventory quantity, capacity, and prices, access the bottom “rooms” category in **edit_me.json**. Ensure that you assign as many unique ids and numbers as you have capacity for. Save the file when you are done making your changes and refresh your HorizonHub webpage.

Managing Bookings:

1. Log-in as an admin

2. Press the admin portal button
3. From here, you can see all the current pending, accepted, etc. bookings.

4. To delete a booking from your records entirely (if it is a test for example), press the red trash can button. To accept a booking, check in a customer, check out a customer, or cancel a booking, press the blue edit button and change the value in the status bar.
